

The Power of Smell in Attracting Women

Having problems attracting a woman into a one-night stand or into something more serious? Other than good looks, nice clothes, as well as great cars, there are also other ways on how to attract a mate. And that is with the strength of smell.

Better than Perfumes However, Using Just Any Kind of Perfume is Not Enough

There has been a new formulation available in the market which is said to help in attracting a potential partner, making it easier for the men to get their one-night stands, while giving the women the power to send men on their knees. All of these effects by using **pheromones** appeal to women or men. So what are pheromones?

Pheromone is a term typically heard and used in the animal kingdom, particularly among insects. It is said to be a secreted or excreted chemical factor, either through scent or through some other secreted chemicals, that triggers a specific social response in the other and of the same gender. One popular example of such social response is sex or procreation.

Pure Passion - Pheromone

However, Believe It or Not, Pheromones are Also Present Among Human Beings

Many experts have said that those with high levels of pheromone can get by easily among the opposite sex. This is the reason why a man, though not gifted in looks and in style, can still get those one-night pleasures easily through smell alone.

The downside of this is the fact that not only guys (and women) are not as gifted with those high levels of pheromones as people have. This is the reason why different items with unique formulations were developed by scientists allowing men to use **pheromones attract women** and vice versa.

- Other than just Sex However, other than just sex, pheromones can also be used for other important social interactions.
- A popular example of this is through job interviews.
- According to technological facts, those with greater looks can get a job as easily compared to those who only possess skills.

However, many medical facts have also stated that those with high levels of pheromones can get by this a lot easier when compared with those with looks alone. So using pheromone perfumes, along with their skills for the job, is a sure way to get hired.

Addition to that, the use of this formulation can also significantly enhance a person's self-esteem. By easily attracting the opposite sex, or perhaps dominating the same sex, may significantly boost a person's self-esteem, allowing them to execute their tasks, such as their jobs, with ease and with confidence.
